Dr. Michael J. Levin, Harvard University.

Mr. Wil Maui dba DataTalks

Preface

This publication contains the result of the 2005 Household, Income, and Expenditure Survey (HIES) that was conducted in the last quarter of 2005 in the CNMI. The publication is organized into two parts and three appendices.

Part I is a short summary that profiles the general population characteristics, labor force population characteristics and income for the Commonwealth as a whole and for each of the islands of Saipan, Tinian and Rota. Part I does not include all the possible topics that are covered in Part II, but only highlights reliable estimates considered to be of most interest to most users. Included in Part I are population thematic maps for Saipan, Tinian and Rota that show how summary statistics can be used with GIS to display information by island in this format. It is left to users to do or request similar analysis with the statistical tables in Part II.

Part II contains detailed statistical tables on many of the topics covered in the 2005 HIES. At the beginning of Part II is a list of tables that may be used as a guide to the various topics contained in the tables.

Appendix A describes the methodology and data processing for the Survey. Appendix B contains the list of terms used in the report and Appendix C contains maps of Saipan, Tinian and Rota that show the geographies used in the field data collection and in displaying results of the Survey.

Note that statistical tables in Part II do not include all the possible subject areas covered in the 2005 HIES. As an example, expenditure data was collected in the Survey, but no tables on this topic is presented in this publication. It will require more resources and expertise to complete processing the rest of the Survey data.

Also, take note, when using the statistical tables in Part II, that some tables include estimates for the entire population while some tables contain estimates only for the sub population that lived in household units and exclude those persons that lived in group quarters. This is because of the Survey methodology. Please see Appendix A for detail.

ACKNOWLEDGEMENTS

This report contains the results of the CNMI's 2005 Household, Income, and Expenditures Survey (HIES).

The Central Statistics Division (CSD) Director, Jose T. Liwanag, coordinated the production of statistical tables from the HIES. CSD staffs, Justin Andrew, Fermin Sakisat, Zelma Benavente and Frank Demapan and Diego Sasamoto, previous CSD staff, were all part of data collection, keying, data editing, processing and tabulations.

Dr. Michael J. Levin of Harvard University, and Mr. Wil Maui dba DataTalks were hired as consultants to assist CSD in final processing and tabulation of the HIES statistical tables. Mr. Michael Stroot, retired US Census Bureau personnel, volunteered time to assist CSD as well.

Mr. Richard Pierce of the Special Assistant for Trade Relations and Economic Affairs of the Governor's office must also be recognized for his untiring efforts in assisting the department and CSD.

U.S. Department of Interior's Office of Insular Affairs funded the Project: CNMI 2005 Household, Income, and Expenditures Survey (HIES) with Grant Number GEN 186. Funding for Mr. Wil Maui and Dr. Levin was also from the OIA.

A special thanks to Secretary Eloy Inos and his Federal Grants staff at the Department of Finance.

Last but not least, a special acknowledgement is also due to all respondents as well as our survey data collectors and data entry clerks.

For more information regarding data in this report, please contact Mr. Jose T. Liwanag, Director of the Central Statistics Division at (670) 664 – 3023 or email to csd@pticom.com.

April 1, 2008

CNMI-Wide Population, Labor Force and Income Profile

CNMI's General Population

The Total Population The estimated total population in the CNMI in October 2005 was 65,927. The estimated total population for the island of Saipan was 60,608, Tinian was 2,829, and Rota was 2,490.

CNMI Population by 2007 Election Districts Saipan Election Districts (ED) 1 and 3 each had about 30% of the CNMI's total population in 2005, followed by ED 5 (13%), ED 2 (10%) and ED 4 (9%). Election District 6 (island of Tinian) had just over 4% while ED 7 (island of Rota) had just fewer than 4% of the CNMI's total population at the time of the survey. See map of Saipan's population concentration on the opposite page for estimated population by EDs for the island of Saipan.¹

Median Age The estimated median age for the entire CNMI population was 29.2 years of age.

Age Distribution Persons in age groups between 20 to 44 years of age made up a relatively larger proportion (48%) of the CNMI's total population than those below age 20 (32%) and those above 44 age groups (20%). This is primarily because of the large number of migrant workers in the CNMI who fall into ages 20 to 44.

Sex Ratio Total females (53%) outnumbered total males (47%) in the CNMI's total population. The sex ratio (male/female) was 87 males to every 100 females in the Commonwealth in 2005.

Ethnicity² The largest single ethnic group in the CNMI was Filipino at about 30% of the estimated total CNMI population in 2005, followed by Chamorro (23%) and Chinese (16%). The Carolinians were about 5% of the total population. Asians made up more than half (53%) of the CNMI's total population, Pacific Islanders about 37%, and Caucasian less than 2%. Multiple ethnic persons made up about 8% of the Commonwealth's total population.

Citizenship Just over half (50.3%) of the CNMI's total population were US citizens; while slightly less than half (49.7%) were non-US citizens. However, by gender, total male US citizens outnumbered total male non-US citizens, while total female non-US citizens outnumbered total female US citizens. This is mainly because of the large number of non-US citizen females who were working in the apparel industry at the time of the survey.

¹ Population estimates are for the Year 2005, 4th Quarter. Election District (ED) Boundaries were created by Law in 2007.

² Percentages were calculated based on single ethnic and does not include mixed ethnic. Persons of mixed ethnic were counted together as multiple ethnic persons to avoid double counting.

Migrant Population About 56% of CNMI's total population was born outside and migrated here, while 44% was born within the Commonwealth in 2005.

Reason for Migrating into the CNMI Of the total migrants in the CNMI in 2005, 75% came for employment purpose. About 12% came as spouse, dependent, or family member of an employed person, 3% came as students, 5% came for visiting, and the rest came for reasons such as missionary, medical and other purposes.

Length of Stay Of the total number of migrants in the Commonwealth, 44% have been in the CNMI less than five years, 16% have been here 5 to 9 years, 30% have been here 10 to 19 years, and about 10% have been here 20 or more years, during the survey period.

Living Arrangement About 84% (55,175) of the total CNMI population lived in household units while 16% (10,739) lived in group quarters.

CNMI's Labor Force Population

Labor Force Participation Rate Of the estimated total 16 years and older persons (48,669) in the CNMI in 2005, 79% were in the labor force.

The Employed Population

CNMI's Employment Rate About 92% (or about 35,400) of the CNMI labor force was employed in 2005.

Percentage of Total Employed by Citizenship About 78% of the CNMI's total employed persons were non-US citizens while 22 % were US citizens in 2005.

Percentage of Total Employed by Ethnic Group Asians comprised 75% of the CNMI's total employed in 2005, Pacific islanders were about 21%, and Caucasians less than 2%. Filipinos (40%) were the largest single ethnic group, followed by Chinese (28%). Chamorros were 13%, Micronesians about 16%, and Carolinians were about 2%.

Percentage of Total Employed by Industry The largest industry in the CNMI, in terms of number of workers, was the *apparel* manufacturing industry with about 31% of the CNMI's total employed persons in 2005. *Accommodation* industry was the second largest which employed 14%, followed by *public administration* which employed 9%, and *retail trade* with 7% of the CNMI's total employed population.

Percentage of Total Employed by Class of Worker Over 79% of the total employed persons in the CNMI worked in the private sector, about 14% worked for the public sector, and less than 1% was self-employed.

The Unemployed Population

CNMI Unemployment Rate About 8% (or about 3,200) of the CNMI's total labor force population was unemployed in 2005.

Percentage of Total Unemployed by Citizenship Of the total unemployed, 68% were US citizens while 32% were non-US citizens. Persons born in the CNMI were about 56% of the CNMI's total unemployed population in 2005.

Percentage of Total Unemployed by Ethnicity Chamorros were 35% of the CNMI's total unemployed, Asians were 24%, Micronesians were 16%, and Carolinians were 15%. Multiple ethnics made up about 8% of the CNMI's total unemployed population in 2005.

CNMI's Income

CNMI's Household Income

Household Income Distribution Over 16,000 households in the CNMI reported household income in 2004. About 28% of these had household income less than \$10,000; 29% had household income of \$10,000 or more, but less than \$20,000; about 13% had household income of \$20,000 or more, but less than \$30,000; 20% had income of \$30,000 or more, but less than \$60,000; and 10% had household income of \$60,000 or more.

The Median Household Income in the CNMI in 2004 was \$17,138.

The Mean Household Income in the CNMI in 2004 was \$25,172.

CNMI's Family Income

Family Income Distribution An estimated 11,500 families in the CNMI reported family income in 2004. About 23% of these had family income of less than \$10,000; 28% had family income of \$10,000 or more, but less than \$20,000; 13% had family income of \$20,000 or more, but less than \$30,000; 11% had family income of \$30,000 or more, but less than \$40,000; 13% had family income of \$40,000 or more, but less than \$60,000; and 12% had family income of \$60,000 or more.

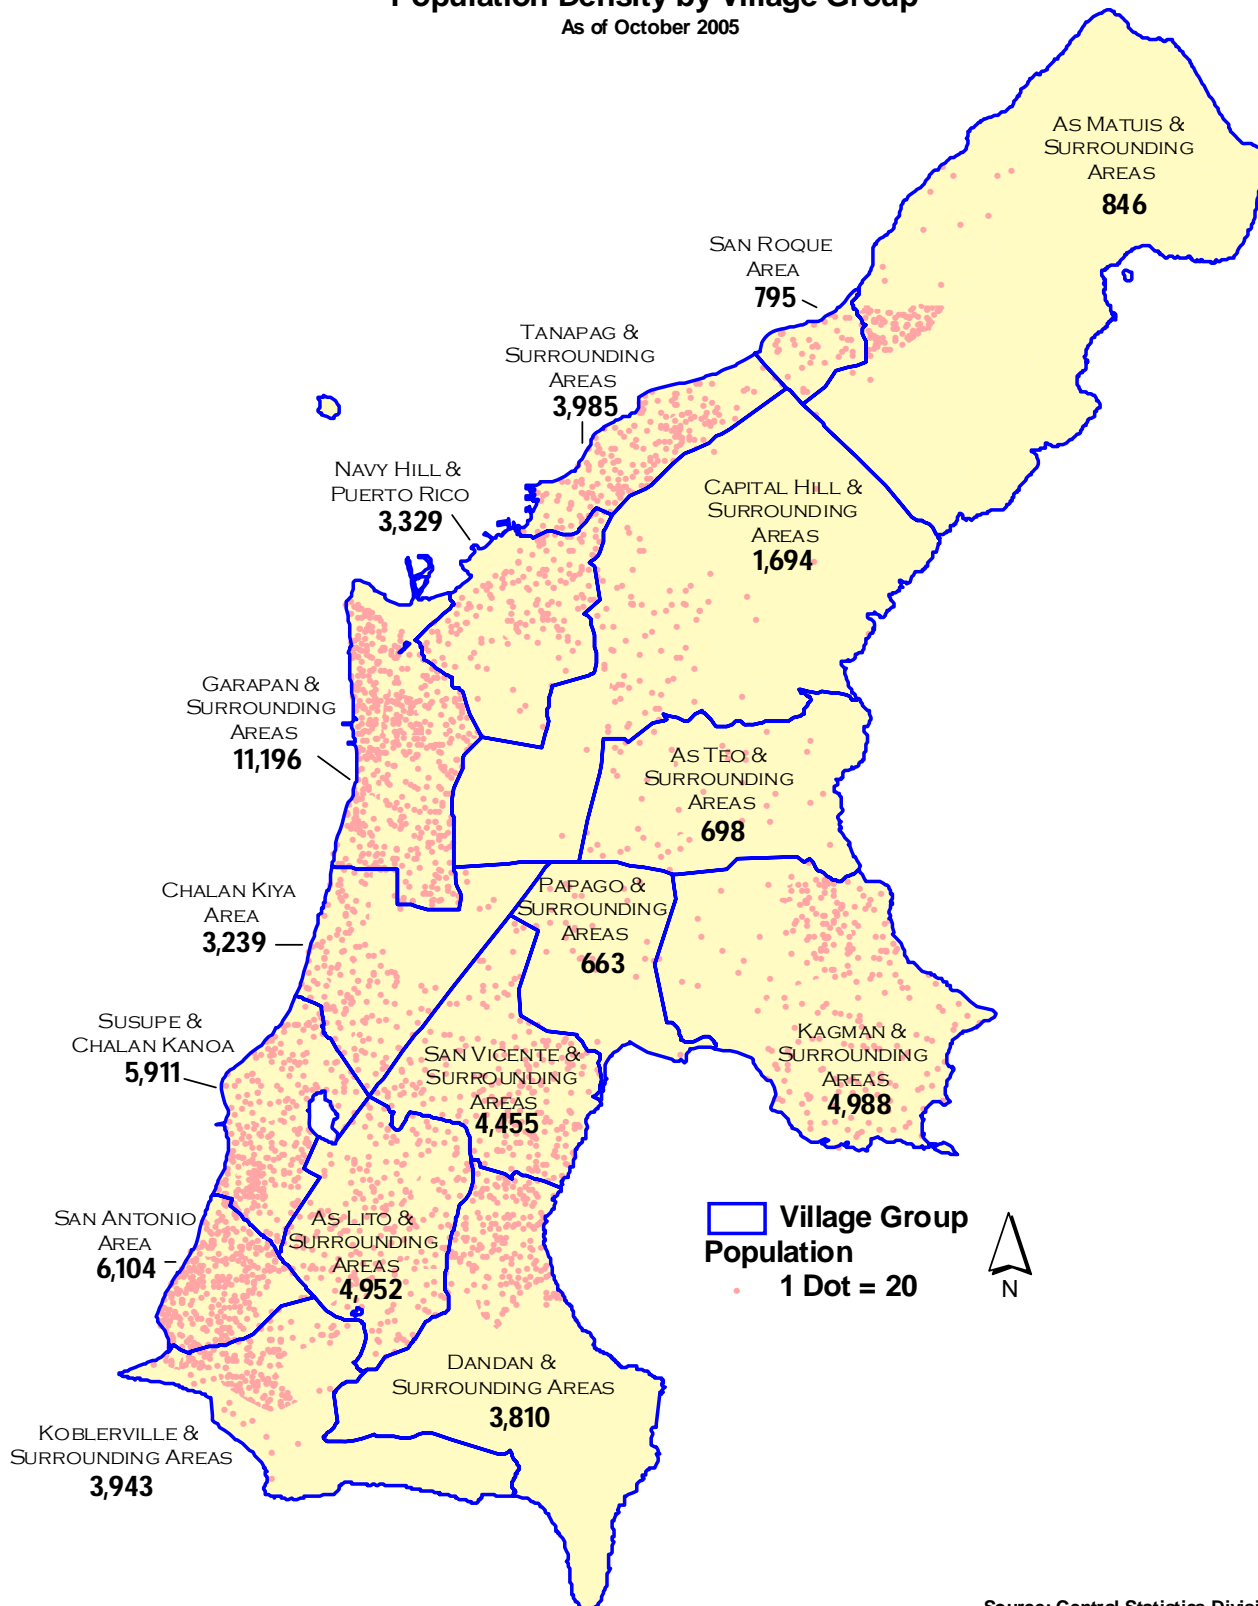

The Median Family Income in the CNMI in 2004 was \$19,625.

The Mean Family Income in the CNMI in 2004 was \$28,461.

CNMI's Per Capita Income

Per Capita Income in the CNMI in 2004 was \$6,178.

Thematic Map: Saipan Population Density by Village Group As of October 2005

Source: Central Statistics Division
April 1, 2008

Saipan's Population, Labor Force, and Income Profile

Saipan's General Population

Saipan's Total Population The estimated total population for the island of Saipan was 60,608. Saipan's population was 92% of the CNMI's total population in 2005.

Saipan's Population by Village Group Garapan and surrounding areas had the largest percentage share (about 16%) of Saipan's total population, followed by San Antonio and surrounding areas (10%). Papago and surrounding areas had the least share (1%) of Saipan's total population. See map of Saipan's population concentration on the opposite page for estimated population by village group in 2005.

Median Age in Saipan The estimated median age for the island of Saipan's population was 29.4 years in 2005. The median age for Saipan is very close to that of the CNMI's population's median age. Because Saipan's population was 92% of the total CNMI population, Saipan's population characteristics—including age—have much greater influence on the population characteristics for the CNMI as a whole.

Age Distribution in Saipan Persons in age groups between 20 to 44 years of age made up a relatively larger proportion (48%) of Saipan's total population than those below 20 years of age (32%) and those above 44 years of age (20%). This is mainly because of the large number of migrant workers in Saipan who fall into ages 20 to 44 in 2005.

Sex Ratio in Saipan Total females outnumbered total males in Saipan: 54% of Saipan's total population was female while 46% was male. The sex ratio (male/female) was 86 males to every 100 females in Saipan in 2005.

Saipan's Population by Ethnic Group The largest single ethnic group in Saipan, in 2005, was Filipino at about 31% of Saipan's total population, followed by Chamorro (20%), and Chinese (16%). The Carolinians were about 6% of the Saipan's population. Asians made up more than half (54%) of Saipan's total population, Pacific Islanders about 36%, and Caucasian less than 2%. Multiple ethnic persons made up about 9% of Saipan's total population.

Saipan's Population by Citizenship Slightly less than half (49%) of Saipan's total population were US citizens; while just over half (51%) were non-US citizens. Temporary non-US citizens comprised 38% of Saipan's total population in 2005.

Saipan's Migrant Population About 57 percent of Saipan's total population was born outside the Commonwealth and migrated to Saipan, while 43 percent was born within the CNMI, at the time of the Survey.

Reason for Migrating to Saipan Of the total migrants in Saipan in 2005, 75% came for employment purposes. About 12% came as spouse, dependent, or family member of an

employed person, 3% came as students, 5% came for visiting, and the rest came in for reasons such as missionary, medical and other purposes.

Length of Stay in Saipan Of the total migrants in Saipan in 2005, 44% have been in Saipan less than five years, 16% have been here 5 to 9 years, 31% have been here 10 to 19 years, and about 10% have been here 20 or more years.

Living Arrangement in Saipan About 83% of Saipan's population lived in household units while 17% lived in group quarters in 2005.

Saipan's Labor Force Population

Saipan's Labor Force Participation Rate Of the estimated total 16 years and older persons (44,743) in Saipan in 2005, 79% were in the labor force.

Saipan's Employed Population

Saipan's Employment Rate About 92% (or about 35,500) of Saipan's labor force was employed in 2005.

Percentage of Saipan's Total Employed by Citizenship Over 79% of the total employed persons in Saipan were non-US citizens while about 21 % were US citizens in 2005. About 65% of Saipan's employed population was temporary non-US residents.

Percentage of Saipan's Total Employed by Ethnic Group Asians comprised over 76% of Saipan's total employed, Pacific islanders made up close to 20% while Caucasians were less than 2%. Chamorros were 12%, Micronesians about 6%, and Carolinians were about 2% of total employed in 2005.

Percentage of Saipan's Total Employed by Industry The largest industry in Saipan, by number of workers, was the *apparel* manufacturing industry with about 33% of Saipan's total employed population in 2005. *Accommodation* industry was the second largest which employed 13%, followed by *public administration* which employed over 8%, and *retail trade* with close to 8% of the CNMI's total employed population.

Percentage of Saipan's Total Employed by Class of Worker Eighty six percent (86%) of Saipan's total employed population worked in the private sector, about 13% worked for the public sector, and less than 1% was self-employed in 2005.

Saipan's Unemployed Population

Saipan Unemployment Rate Close to 8% (or about 2,700) of the Saipan's total labor force was unemployed in 2005.

Percentage of Saipan's Total Unemployed by Citizenship Of the total Saipan unemployed population, 66% were US citizens while 34% were non-US citizens. Persons

born in the CNMI made up 53% of Saipan's total unemployed. Temporary non-US citizens were about 18%.

Percentage of Saipan's Total Unemployed by Ethnic Group Chamorros were 30% of Saipan's unemployed population in 2005, Asians were 25%, Micronesians were 18%, and Carolinians were 17%. Multiple ethnics made up about 8% of the total unemployed in Saipan in 2005.

Saipan's Income

Saipan's Household Income

Household Income Distribution Over 14,000 households in Saipan reported household income in 2004. About 29% of these had household income less than \$10,000; 30% had household income of \$10,000 or more, but less than \$20,000; about 13% had household income of \$20,000 or more, but less than \$30,000; 19% had income of \$30,000 or more, but less than \$60,000; and close to 10% had household income of \$60,000 or more.

The Median Household Income in Saipan in 2004 was \$16,835.

The Mean Household Income in Saipan in 2004 was \$24,629.

Saipan's Family Income

Family Income Distribution An estimated 10,500 families in Saipan reported family income in 2004. About 23% of these had family income of less than \$10,000; 30% had family income of \$10,000 or more, but less than \$20,000; 13% had family income of \$20,000 or more, but less than \$30,000; 11% had family income of \$30,000 or more, but less than \$40,000; and almost 12% had family income of \$40,000 or more, but less than \$60,000; and 12% had family income of \$60,000 or more.

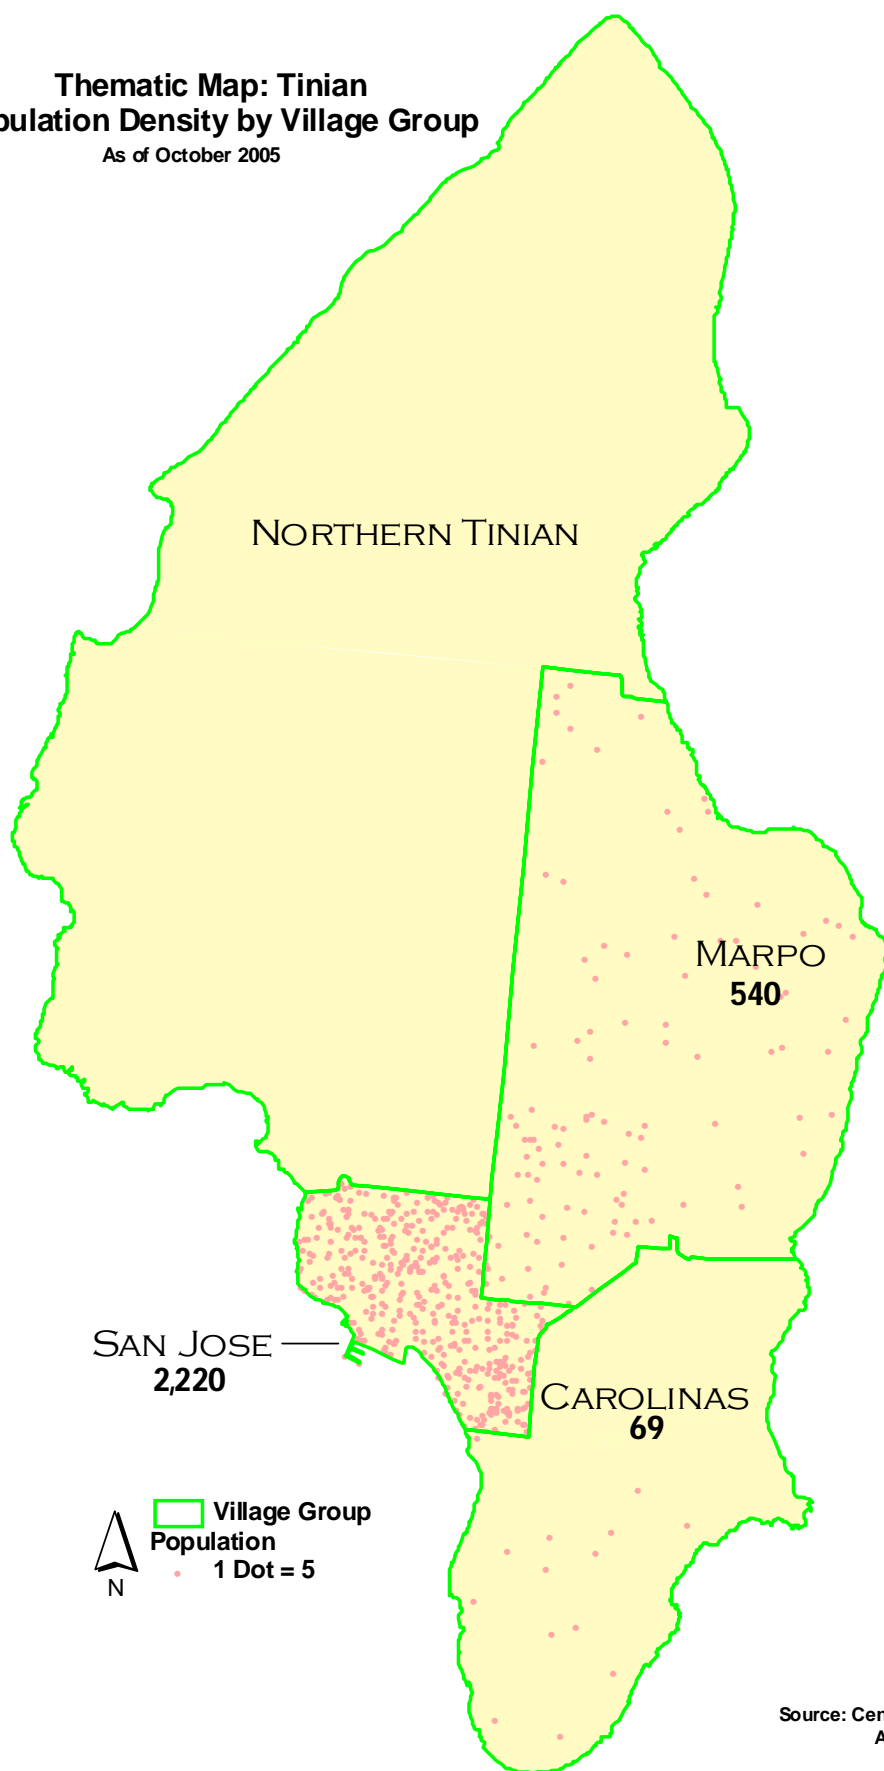

The Median Family Income in Saipan in 2004 was \$19,174.

The Mean Family Income in Saipan in 2004 was \$27,933.

Saipan's Per Capita Income

Per Capita Income in Saipan in 2004 was \$6,017.

Thematic Map: Tinian
Population Density by Village Group
As of October 2005

Source: Central Statistics Division
April 1, 2008

Tinian's Population, Labor Force and Income Profile

Tinian's General Population

Tinian's Total Population The estimated total population for Tinian was 2,829. Tinian's population was just over 4% of the CNMI's total population in 2005.

Tinian's Population by Village Group The village of San Jose in Tinian had about 76% of Tinian's total population in 2005. Marpo had about 20%, while Carolinas had less than 3% of Tinian's total population at the time of the survey. See map of Tinian's population concentration on the opposite page for estimated population by village group for Tinian in 2005.

Median Age in Tinian The estimated median age for the island of Tinian's population was 32.2 years, highest among the three islands and higher than CNMI-wide median age.

Age Distribution in Tinian Persons in age groups between 20 to 44 years of age comprised more than half (53%) of Tinian's total population. Those below 20 years of age were 28% and those above 44 years of age were 19% of Tinian's total population. Like in Saipan, this was mainly because of the large number of migrant workers in Tinian who fall into ages 20 to 44, at the time of the survey.

Sex Ratio in Tinian In Tinian, unlike in Saipan, total males, which was 53% of Tinian's total population, outnumbered total females (47%). The sex ratio (male/female) was 113 males to every 100 females in Tinian in 2005.

Tinian's Population by Ethnic Group The largest single ethnic group in Tinian was Chamorro which was 44% of Tinian's total population in 2005, followed by Filipino (32%), and Chinese (9%). Asians made up almost half (49%) of Tinian's total population, Pacific Islanders about 45%, and Caucasian 1%. Multiple ethnic persons made up almost 5% of Tinian's total population in 2005.

Tinian's Population by Citizenship More than half (55%) of Tinian's total population was US citizens; while 45% was non-US citizens in 2005. Temporary non-US citizens comprised 42% of Tinian's total population in 2005. Persons born in the CNMI were 46% of Tinian's total population at the time of the survey.

Tinian's Migrant Population About 54 percent of Tinian's total population was born outside the CNMI and migrated to Tinian, while 46 percent was born within the CNMI, at the time of the Survey.

Reason for Migrating to Tinian Of the total migrants in Tinian in 2005, 84% came for employment purpose. About 7% came as spouse, dependent, or family member of an employed person, 3% came as students, 1% came for visiting, and the rest came for reasons such as missionary, medical and other purposes.

Length of Stay in Tinian Of those who migrated to Tinian, 46% have been in Tinian less than five years, 25% have been there 5 to 9 years, 22% have been there 10 to 19 years, and 7% have been there 20 or more years during the survey period.

Living Arrangement in Tinian About 80% of Tinian's population lived in household units while 20% lived in group quarters in 2005.

Tinian's Labor Force Population

Tinian's Labor Force Participation Rate Of the estimated total 16 years and older persons (2,197) in Tinian in 2005, 89% was in the labor force.

Tinian's Employed Population

Tinian's Employment Rate Eighty three percent (83%, about 1,600) of Tinian's labor force was employed in 2005.

Percentage of Tinian's Total Employed by Citizenship About 71% of Tinian's total employed persons were non-US citizens while about 29% were US citizens in 2005. About 68% of Tinian's total employed population was temporary non-US citizens.

Percentage of Tinian's Total Employed by Ethnic Group Asians comprised about 71% of Tinian's total employed population while Pacific islanders made up 27% in 2005. Filipino, at 42%, was the largest single ethnic group in Tinian's total employed population; Chamorro was second at 26%, followed by Chinese (15%).

Percentage of Tinian's Total Employed by Industry The largest industry in Tinian, by number of workers, was the *accommodation* industry with about 38% of Tinian's total employed population in 2005. *Public Administration* was the second largest sector employing almost 17%, followed by *other services* with 11%.

Percentage of Tinian's Total Employed by Class of Worker Seventy four percent (74%) of Tinian's total employed population was employed in the private sector, about 26% worked for the public sector in 2005.

Tinian's Unemployed Population

Tinian's Unemployment Rate Seventeen percent (17%, about 330) of Tinian's total labor force was unemployed in 2005.

Percentage of Tinian's Total Unemployed by Citizenship Of the total unemployed population in Tinian in 2005, 80% were US citizens while 20% were non-US citizens. Persons born in the CNMI made up 71%, while temporary non-US citizens were about 18% of Tinian's total unemployed population.

Percentage of Tinian's Total Unemployed by Ethnic Group Chamorros were 75% of Tinian's unemployed population in 2005; Asians were 22%; and multiple ethnics were 4%.

Tinian's Income

Tinian's Household Income

Household Income Distribution Over 650 households in Tinian reported household income in 2004. Twenty two percent (22%) of these had household income less than \$10,000; 26% had household income of \$10,000 or more, but less than \$20,000; about 11% had household income of \$20,000 or more, but less than \$30,000; 27% had income of \$40,000 or more, but less than \$60,000; and 14% had household income of \$60,000 or more.

The Median Household Income in Tinian in 2004 was \$21,538.

The Mean Household Income in Tinian in 2004 was \$32,318.

Tinian's Family Income

Family Income Distribution An estimated 463 families in Tinian reported family income in 2004. Almost 20% of these had family income of less than \$10,000; 18% had family income of \$10,000 or more, but less than \$20,000; close to 15% had family income of \$20,000 or more, but less than \$30,000; 8% had family income of \$30,000 or more, but less than \$40,000; and 23% had family income of \$40,000 or more, but less than \$60,000; and 15% had family income of \$60,000 or more.

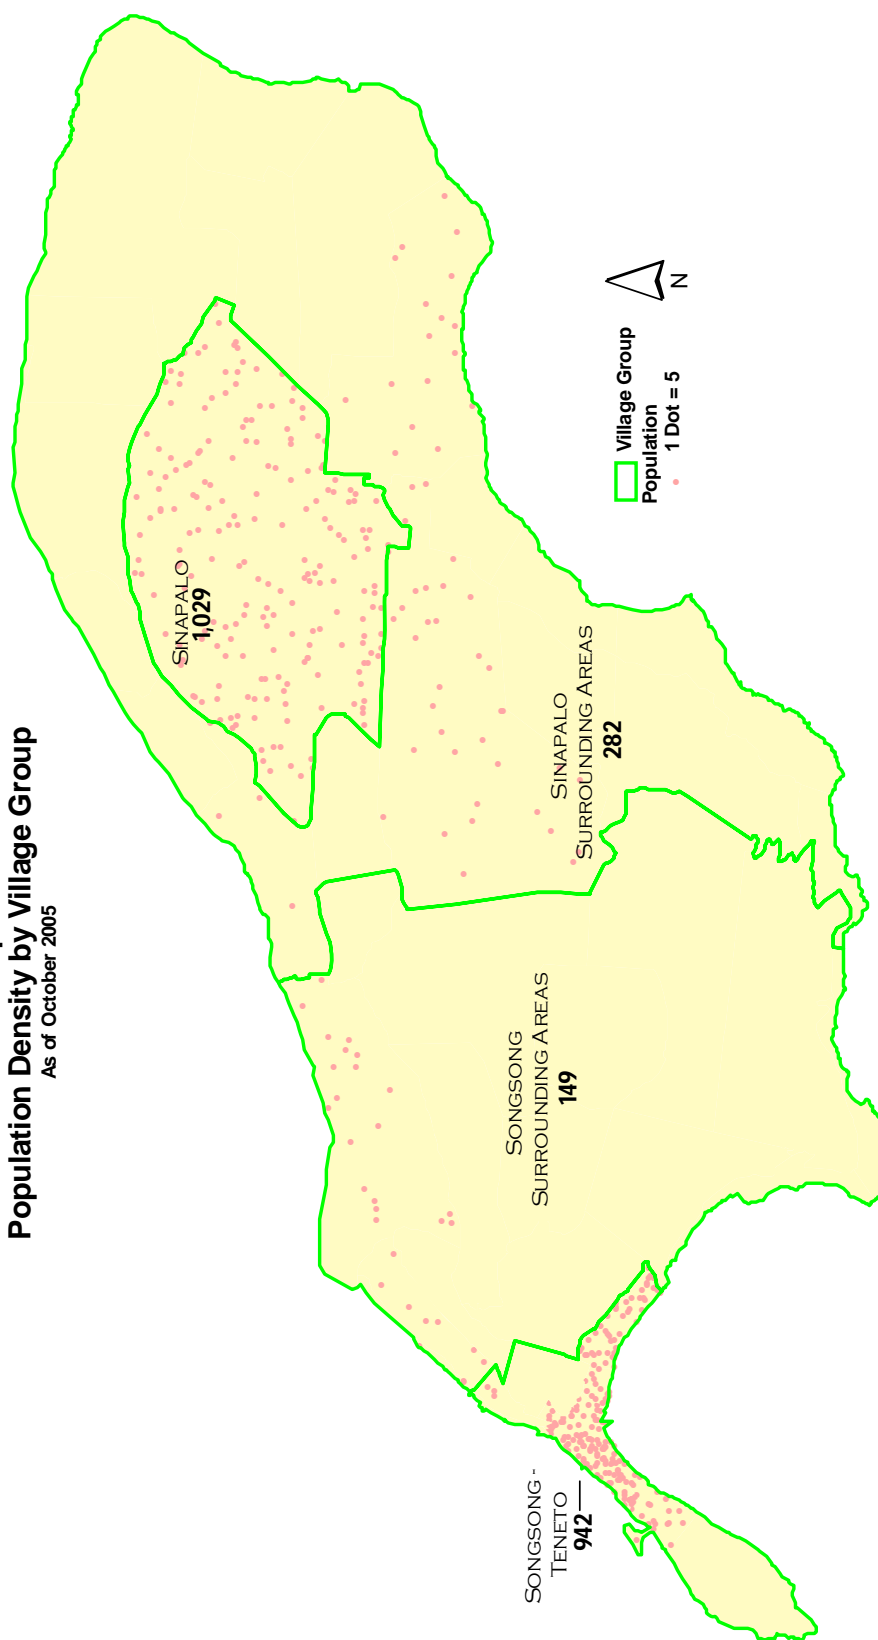

The Median Family Income in Tinian in 2004 was \$26,630.

The Mean Family Income in Tinian in 2004 was \$35,352.

Tinian's Per Capita Income

Per Capita Income in Tinian in 2004 was \$7,494

Thematic Map: Rota **Population Density by Village Group** As of October 2005

Source: Central Statistics Division
 April 1, 2008

Rota's Population, Labor Force and Income Profile

Rota's General Population

Rota's Total Population The estimated total population for the island of Rota was 2,490. Rota's population was just under 4% of the CNMI total population in 2005.

Rota's Population by Village Group Sinapalo village in Rota had 47% of Rota's total population in 2005; Songsong village had 33%; and Teneto had 10%. See map of Rota's population concentration on the opposite page for estimated population by village group for Rota in 2005.

Median Age in Rota The estimated median age in Rota's population was 31.9 years old in 2005, which was slightly lower than Tinian's but higher than Saipan's.

Age Distribution in Rota Persons in age groups between 20 to 44 years of age was the same percentage (38%) as those in age groups below 20 (38%) of Tinian's total population. Those above 44 years of age were 20% of Tinian's total population in 2005.

Sex Ratio in Rota In Rota, total males was 51% of the island's total population, just slightly more than total females (49%). The sex ratio (male/female) was 104 males to every 100 females in Rota in 2005.

Rota's Population by Ethnic Group The largest single ethnic group in Rota, in 2005, was Chamorro at 65% of Rota's total population, followed by Filipino (22%). Asians made up about 25% of Rota's total population, Pacific Islanders about 67% and Caucasian just over 1%. Multiple ethnic persons made up 7% of Rota's total population.

Rota's Population by Citizenship Seventy seven percent (77%) of Rota's total population was US citizens, while only 23% was non-US citizens. Persons born in the CNMI were 68% of Rota's total population while temporary non-US citizens comprised 18% of Rota's total population in 2005.

Rota's Migrant Population Unlike in Saipan and in Tinian, in Rota, less than half (32%) of the island's total population was born outside the CNMI and migrated to Rota, while a big majority (68%) was born within the CNMI, at the time of the Survey.

Reason for Migrating to Rota Of the total migrants in Rota in 2005, 72% came for employment purpose. About 11% came to Rota as spouse, dependent, or family member of an employed person, 3% came as students, 3% came for visiting, and the rest came for reasons such as missionary, medical and other purposes.

Length of Stay in Rota Of the total migrant population in Rota in 2005, 39% have been in Rota less than five years, 15% have been there 5 to 9 years, 37% have been there 10 to 19 years, and 9% have been there 20 or more years.

Living Arrangement in Rota Ninety six percent (96%) of Rota's population lived in household units while 4% lived in group quarters in 2005.

Rota's Labor Force Population

Rota's Labor Force Participation Rate Of the estimated total 16 years and older persons (1,729) in Rota in 2005, 63% was in the labor force, which was the lowest of the three islands.

Rota's Employed Population

Rota's Employment Rate About 90% (about 980) of Rota's labor force was employed in 2005.

Percentage of Rota's Total Employed by Citizenship Unlike in Saipan and in Tinian, less than half, about 49%, of the Rota's total employed population was non-US citizens while about 51% was US citizens in 2005. Forty one percent (41%) of Rota's total employed population was temporary non-US citizens, while 42 percent was born in the CNMI.

Percentage of Rota's Total Employed by Ethnic Group Asians comprised 50% of Rota's total employed population while Pacific islanders made up 49%. Chamorro, at 48%, was the largest single ethnic group in Rota's total employed population, followed by Filipino (44%), then Bangladeshi and Japanese each at 2%. Multiple ethnic group was less than 1% of Rota's total employed population in 2005.

Percentage of Rota's Total Employed by Industry The largest industry in Rota, by number of workers, was the *public administration* with about 36% of Rota's total employed population in 2005. *Arts, entertainment, and recreation* was the second largest with 12%, followed by *education services* (11%), and *accommodations* (10%).

Percentage of Rota's Total Employed by Class of Worker About 49% of Rota's total employed population was employed in the private sector, just over half (51%) worked for the public sector in 2005.

Rota's Unemployed Population

Rota's Unemployment Rate Ten percent (10%, about 110) of Rota's total labor force was unemployed in 2005.

Percentage of Rota's Total Unemployed by Citizenship Of the total unemployed population in Rota in 2005, 89% was US citizens while 11% was non-US citizens. Persons born in the CNMI made up 71%, while temporary non-US citizens were about 6% of Rota's total unemployed population.

Percentage of Rota's Total Unemployed by Ethnic Group Chamorro was about 66% of Rota's unemployed population in 2005; Filipino was about 12%; and multiple ethnic group was also about 12% in 2005.

Rota's Income

Rota's Household Income

Household Income Distribution About 700 households in Rota reported household income in 2004. Twenty one percent (21%) of these had household income less than \$10,000; 23% had household income of \$10,000 or more, but less than \$20,000; about 17% had household income of \$20,000 or more, but less than \$30,000; 24% had income of \$30,000 or more, but less than \$60,000; and 14% had household income of \$60,000 or more.

The Median Household Income in Rota in 2004 was \$22,270.

The Mean Household Income in Rota in 2004 was \$29,839.

Rota's Family Income

Family Income Distribution An estimated 565 families in Rota reported family income in 2004. About 17% of these had family income of less than \$10,000; 22% had family income of \$10,000 or more, but less than \$20,000; 15% had family income of \$20,000 or more, but less than \$30,000; 13% had family income of \$30,000 or more, but less than \$40,000; 18% had family income of \$40,000 or more, but less than \$60,000; and 15% had income of \$60,000 or more.

The Median Family Income in Rota in 2004 was \$24,514.

The Mean Family Income in Rota in 2004 was \$32,583.

Rota's Per Capita Income

Per Capita Income in Rota in 2004 was \$8,592

Appendix A

Methodology and Data Processing

Geography Coverage for the 2005 HIES

The purpose of the 2005 Household, Income, and Expenditure Survey (HIES) was to gather data that would reasonably profile the housing and population characteristics and income and expenditure patterns in the CNMI. The CNMI is comprised of 14 islands, 4 of which have people living on them. The 2005 HIES covered the three most populated islands in the CNMI: Saipan, Tinian and Rota. The Northern Islands had a total population of 6 persons in 2000, and was not included in the 2005 HIES because of its tiny population and the high cost of including them in the survey.

The sample of households selected to estimate the CNMI housing and population status was done in a way that would produce the best estimates for the entire CNMI and by Island, given the resources available at the time.

The 2005 HIES was conducted by the Central Statistics Division (CSD), Department of Commerce, Commonwealth of the Northern Mariana Islands. The Survey reference date was October 1, 2005. The data collection was conducted between October 1st and December 31, 2005.

The Sampling Universe

The CSD first developed a sampling universe for the CNMI from the 1995 Census of Housing and Population. This paper-based universe was used in the various labor force and household surveys in the late 1990s. In the early 2000s, CSD began creating a comprehensive database housing register for the CNMI with a GIS mapping component and began using it as the sampling universe for labor force/household surveys. The 2005 HIES sample was pulled from the best ever universe in the CNMI. This is because the housing register and the housing maps were fully updated in the summer of 2005 just before the data collection field work was conducted in the fall of 2005.

The complete CNMI Housing Register in 2005

All housing units that existed in the CNMI—Saipan, Tinian, and Rota—in 2005 are listed in a register which is tracked in a MS Access database. The fields in the register includes island, assignment area (AA), block, map spot (MS) number, village, building type, unit type, occupancy status, householder name, ethnicity of the household head, and phone number. (A blank copy of the address register may be obtained from the CNMI Central Statistics Division.) The Island, AA, Block, MS, and village fields are for geography; building type and unit type allows CSD to classify the type of living arrangements; and occupancy status allows for CSD to determine vacancy status of the unit. The last 3 fields—householder name, ethnicity, and phone number—help assist in locating the households and were considered optional when CSD collected data for building the register; all of the others were required when the register was created. From a completed housing register and housing maps, CSD is able to categorize housing units by geography, by household type, building types and occupancy status.

CSD CNMI Geography for Surveys

To be able to uniquely identify and track each of the housing units in the CNMI, to be able to assign a group of housing units to a survey field worker in a manageable size, and to report the results of the surveys in a meaningful way, the three most populated islands in the CNMI are divided geographically in the following scheme.

The Map of the Housing Units

All existing housing units in the CNMI in 2005 are digitized and tracked in Arcview 3.2 (an older version of ArcGIS). The shapefiles and tables in Arcview include the same geography fields in the CNMI Housing Register: Island, AA, Block, MS, and Village. There is a one-to-one relationship between these fields in Arcview and the same ones in the Register.

Geographic Block

Each of the islands is divided into small geographic units referred to as blocks. The size and boundary of each block was determined based on the existing roads, mountains, cliff lines, streams, and prominent landmarks. Population concentration was also an important consideration for delineating block boundaries. As much as possible, where appropriate, the boundaries followed and were drawn consistent with boundaries used in previous census block boundaries in prior years. A map that shows each of the blocks for each of the three islands may be viewed at the CSD.

Assignment Area

In each of the islands, geographic blocks are combined to form Assignment Areas (AAs). Similar to the formation of the blocks, the size and boundary of each AA was determined based on the existing roads, mountains, cliff lines, and prominent landmarks. The number of houses in the area was an important factor in determining the size of the AA. A major consideration was to keep the number of houses in each AA manageable for field work.

Each AA is assigned a unique 4 digit number. AAs for Saipan are numbered using 1001 to 1999. Tinian AAs use 2001 to 2999, and Rota AAs use 3001 to 3999. Saipan has a total of 259 AAs, Tinian has 38, and Rota has 48. A map of all AAs for the island of Tinian is on page C-9, Appendix C. Similar maps for Saipan and Rota may be viewed at the CSD.

Each of the blocks is assigned a 3 digit number. Each AA uses the same numbering series for its blocks; for example, AA 1027 has blocks numbered 901, 902, and 903, up to 908. For illustration of AA and Block, see page C-13, Appendix C.

Map Spot

Within each block, each building that people live in or that has housing units (HU) in it is mapped with a dot. And each of the housing unit is assigned a unique number, referred to as the Map Spot number. The numbering of the HUs in a block always starts with one (1) and continues sequentially to however many is needed to account for all units in a particular block. A number is issued only once and never repeats within a particular

block. The map spot number is 4 digits. For illustrations of an AA, block and MS, see page C-13, Appendix C.

Unique Housing Unit Address

Using the above scheme, each of the housing unit in the CNMI is given a unique number or address based on Island, AA, Block, and Map Spot sequence. For example, the 1st housing unit in Block 901, AA 1027, in Saipan is given the housing ID 1. Hence, the unique housing unit address would be 1027, 901, 0001. Again, see map illustration on page C-13, Appendix C. This unique housing ID is used to track housing units in a database in MS Access and in tables and shapefiles in Arcview. It is also used to uniquely identify survey forms, when doing field surveys, and is also used to track the same housing unit records in the computer data files for data processing.

Villages

Each of the three islands is divided into villages. The village boundaries were determined using old village maps for Saipan, Tinian and Rota and also from consulting with individuals familiar with what are commonly considered as village boundaries in the three islands. It must be noted, and it is an important note, that there are no formal village boundaries in existence in the CNMI yet. It's not uncommon for each of the various CNMI agencies and working groups to have their own village boundaries that are different from one another when doing geography work.. The village boundaries here are what CSD considers as statistical boundaries which are used to report statistical summaries for the CNMI. In addition to individual villages, the villages are also grouped together to form larger geographic areas for statistical reporting purposes. See pages C-2 and C-5, Appendix C, for maps of Saipan villages and village grouping. See pages C-6 to C-8, Appendix C, for maps of Tinian villages and village grouping and pages C-10 to C-12, Appendix C, for maps of Rota villages and village grouping.

Election Districts

The island of Saipan is also divided into 5 election districts (ED), based on the 2007 court ruling. Previously there were 11 election districts. See page C-4, Appendix C, for a map of Saipan's EDs.

For reporting summary statistics for the 2005 HIES, the CSD produced reports by island, by village grouping and by individual village when appropriate. CSD also, reported summaries by election districts. See thematic maps on island population for Saipan, Tinian and Rota on pages S-6, S-10, S-14.

The CNMI housing register in MS Access was first completed in 2002. The GIS component was completed for Saipan in 2003. The GIS/database register and maps were first used in conducting a survey in Saipan, excluding Tinian and Rota, in the 2003. In 2005, both the housing register and the GIS maps were updated and for the first time included Tinian and Rota, just prior to conducting the 2005 HIES.

Sampling for 2005 HIES

In collecting data on housing and population in the CNMI, the CSD separated the housing and population into two groups: 1) housing units where a family or household of 10 or less persons lived together and 2) housing arrangement where more than 10 persons lived together under a company provision. These categories follow the same ones used by the US Census Bureau when conducting census in the Commonwealth and also have been used in prior CSD surveys. The HIES category 1 is referred to as household units (HHU) and category 2 is referred to as group quarters (GQ). From past trends, HHUs and the population living in them have been increasing steadily, while the number of GQ and the population living in them have fluctuated over time. To be as accurate as can be with minimum cost, the CSD collects data from these two populations with different methods. For HHUs a sample is taken and a long form is used to collect housing and population data; for GQ a complete count of persons is done with a short form.

To select the sample for 2005 HIES, the universe (the housing register) was stratified by island. Within each island the housing units were separated into household units (HHUs) and group quarter units (GQs). For the GQs, a complete count of all persons in them was done using a short form with the cooperation of the human resource personnel from each of the companies that housed their employees in GQs. For the HHUs, a stratified random sampling technique was used in selecting the sample for the Survey from all occupied HHUs.

For Saipan, the sampling was a stratified random sample with the village as the strata. All occupied housing units were selected and then arranged or sorted by village, AA, Block and MS. A random sample of the occupied units from each of the villages was drawn. For field work, the randomly selected housing units were assigned by AA. A total of 1,274 housing units were selected from Saipan. In addition, two additional housing units were randomly selected from each of the AAs in the sample and used as substitutes for situations where a housing unit is no longer occupied, demolished, converted into a business establishment, a householder refused to complete the survey or for other reasons.

For Tinian and Rota, there was no stratification by village. Instead, 124 HHUs from Tinian and 126 from Rota were randomly selected from all occupied housing units from each of the two islands. This decision was made because 1) we were behind in determining the appropriate village boundaries for these two islands and 2) because the total number of occupied housing units were/are relatively small in both islands (671 in Tinian and 703 in Rota in 2005) and the units are concentrated in a few, smaller areas—San Jose and Marpo in Tinian and Songsong and Sinapalo in Rota.

To perform the sampling, all occupied HHUs were selected from the MS Access database housing register for the three islands and exported into SPSS where random sampling was performed. For Saipan, the records were sorted by island, Village, AA, Block, MS

and then random sample of units were drawn from each of the villages. For Tinian and Rota, the records for each of these two islands were sorted by AA, Block, and Map Spot and then a random sample of units was drawn for each island. In addition, two additional housing units were randomly drawn from each of the AA in the Sample and used as alternates for situations where a selected housing unit in an AA could not be completed for one reason or another.

After samples of HHUs were drawn, they were exported back to MS Access where an application was developed to track the progress of the field survey work. The database application produced, on a daily basis, the number of questionnaires completed by enumerators, by AA, by village, and as well as other reports that made it possible and easier for the field supervisor to effectively manage the field data collection. The field supervisor constantly looked at the flow of completed questionnaires from the field and assign/reassign field workers to make sure that enough forms were completed from each of the strata when the field work ended.

Data Collection

The primary means of collecting the data from each of the selected HHUs was through a personal visit and interview of each of the selected households. Survey enumerators were hired and trained to locate each of the housing units and conduct a personal interview and complete a questionnaire. In cases where follow-up was necessary, the telephone was also used to complete the questionnaires to minimize the cost and speed up the process. In all cases the first contact with each household was a personal visit; and most questionnaires were completed this way. But telephone follow-up was also commonly used to complete or verify pieces of information. In situations where an HHU has become vacant, converted into a business, or demolished since the universe was updated, another HHU was used as a substitute. The substitute HHU was randomly selected from the AA as described above. Also, in situations where a householder refused to answer the survey or was off-island and did not return in time for the survey enumerator to complete a form for that particular HHU, a substitute HHU was issued.

To count all persons in GQs and collect basic data, CSD keeps track of buildings that are used as company GQs. Survey enumerators contacted the local representative or human resource personnel responsible for company employees in GQs and asked the company personnel to complete the GQ form. Enumerator arranged to pick the completed form and verified it for completion before leaving the GQ office.

The 2005 HIES is one of the most recent of the many similar surveys conducted by the Central Statistics Office since the 1990s. The CSD has conducted similar surveys under different names. The CSD also coordinates and collects census data for the CNMI. Hence, CSD has institutionalized the process of collecting field data for surveys of this type and has references on training, data collection, coding and keying the data for processing available in-house. Most, if not all, of these procedures were developed with assistance from the US census Bureau or from materials and references from the Bureau.

Data Collection and Questionnaire Review

To complete the data collection, the CSD hired 60 temporary field enumerators for the 2005 HIES field work. The CSD, with the US Census Bureau, trained the field workers on how to complete the questionnaire and how to use the housing register and survey maps to find the selected HHUs and complete the survey forms. Each enumerator was paid according to the number of completed questionnaires. To be considered for payment, a questionnaire must pass a field review. Five persons were hired and trained to review questionnaires coming from the field for completeness and approval for pay. Enumerators were paid every two-week period. During the first day of the field work, each enumerator was sent out to his/her assignment area (AA) and completed only one HHU and brought it back to the CSD office for review. In instances where an enumerator was having difficulty finding the right HHU, using the register and the maps, a knowledgeable person took that worker out, assisted, and showed the worker how to find the right HHU. Three persons who helped create the housing register and maps were available to assist in this task during the first week of the survey period. During the first week of the Survey, the field supervisor and the review staff closely reviewed each enumerator's forms to catch errors. Forms with errors were tagged appropriately and rejected back to the field enumerator who had to correct his/her own errors. The enumerator had to revisit the house, make a telephone call, or do whatever was necessary to correct the errors and completed all form with errors. During the first week of the field enumeration, field work was deliberately slowed down to be sure that forms were being completed properly and completely. After the first week, the good enumerators were encouraged to increase their production; the ones that had difficulties and problematic forms were assisted again on how to complete the forms. During the first few weeks, some of the field enumerators were let go, some quit the job, and others become inactive. The strategy that CSD employed—which it has learned over the years—was to quickly identify those good field workers and encourage them to produce, assisted those that needed help to become better and let go of those who chose to become inactive.

The above approach was to make sure that the forms coming from the field were accurate and complete, as much as possible. Once the good field enumerators were known, the field supervisor assigned them to AAs that have not been visited and also assigned them to complete the AAs that were initially started by an enumerator who was released or became inactive. The objective was to get enough sampled HHUs completed from each stratum, during the survey period. At the end of the survey period, some HHUs could not be completed because of the reasons stated above or the questionnaires were only partially completed. The incomplete questionnaires were not coded and not keyed into the computer.

Coding and Keying

After the questionnaires passed the field review, each one was coded and prepared for keying. Each of the office staff was trained in coding the various entries using the appropriate code sheet references. Coding done ranged from ethnicity/race to industry and occupation. For industry classification, the 2005 HIES used North American Industry

Classification (NAICS) 2002. For occupation, the HIES used 1980 Standard Occupational Classification (SOC) Manual.

The Questionnaire Forms

The 2005 HIES HHU questionnaire was modified and adapted from the questionnaire used in the 1998 HIES. Almost all, if not all, of the wording of questions came from 1998 HIES, but modified as appropriate for the 2005 purpose. The housing and population questions are also the same ones used in other surveys, like the household and labor force surveys, which CSD conducts periodically, when funds are available. One important change was in the treatment of the geography to reflect the new AA, Block, MS and villages described above. Because the individual questions in the questionnaire were not new, but an adaptation of previous questionnaires, and because of the time and cost involved in field testing, no field testing was done with the 2005 HIES questionnaire. A copy of the questionnaire may be obtained from the CSD.

The 2005 HIES GQ questionnaire was developed and used in prior similar surveys. A copy of the GQ form may be obtained from the CSD.

Tabulation

Survey Weights

To be able to estimate the total population for the entire CNMI, by island, by village group, EDs and other sub populations, survey weights were calculated and used in the tabulations. The weights were calculated based on the sampling technique. Weights were calculated and assigned based on the type of housing unit (whether HHU or GQ) and based on island. For Saipan, multiple weights were calculated and assigned based on the number of HHUs completed from each of the villages (the strata). For Tinian and Rota, a single weight was used for HHUs and a single weight was used for GQs. For details on the number of HHUs and sample sizes, number of completions and the weights for HHUs and GQs for each of the three islands, see worksheet on page A-11, Appendix A. Note that the total number of HHUs sampled is larger than the actual number of completed HHUs. From past surveys, it has been established that it is very difficult to complete all HHUs selected, so it is better to select a larger sample size and monitor the progress of the field work to ensure that enough HHUs are completed from each of the islands and from the different villages within Saipan to ensure reasonable estimates for these geographies.

The weights were derived based on the number of households or HHUs completed in the survey. Calculating weights based on HHUs is more appropriate since, HHUs were the basis for sampling. Since we know the number of occupied HHUs by island, by AAs, and by village (for Saipan) we can easily calculate the appropriate weights once we know the number of HHUs in the sample actually surveyed. Please see page A-11, Appendix A, for detail. The assumption is that the number of completed HHUs is large enough and

contains enough persons to produce reliable estimates for the populations. Please, note that this is true only for the HHUs and population in the HHUs. For GQs, the weight is based on island and persons in the GQs. For Saipan, all persons in GQs were assigned a weight of 1.5. For Tinian and Rota, the QG weights were both equal to 1.0. For Tinian and Rota, each island had only one GQ each and everyone in each GQ was counted. For Saipan, the garment manufacturing industry that used to house all of their contract workers in GQs began to change this housing arrangement. As far back as 2002, some of these companies began to allow their workers to live in what they refer to as a “self-arranged” type of housing, instead of the company provided housing. Companies who switched to the “self-arranged” housing arrangement no longer were responsible for employee housing and could not provide CSD with an accurate count of employees who would have been in GQs. In some cases, the employees still stayed in the same buildings, but the employees were paying rent to a landlord instead of staying there under the responsibility of the employer as before. In CSDs housing register, the buildings were still considered as GQs. Hence, for Saipan, the existence of the “self-arranged” housing arrangements would cause an undercount in the GQ population in 2005. To remedy this, the persons living in GQs were assigned a weight of 1.5 to compensate for this change in living arrangement and to avoid undercounting persons in GQs.

Imputed Values

Imputed values were used and were mainly in certain characteristics of the persons living in group quarters. As mentioned earlier, the persons in GQs were enumerated using a short form which only asked for only 10 variables about each of the persons in the GQ including, gender, birth date, age, citizenship, birthplace, date of entry to the CNMI, occupation, hourly wage, annual salary, and total hours worked. From these known variables, values were imputed into other variables in the data file. For example, all persons in GQ were considered employed at the time of the survey and hence were imputed as employed and in the labor force; a persons ethnic/race was based on his/her citizenship and birthplace--for example, a China citizen born in China was imputed as Chinese ethnic.

In the HHUs, minimal imputation was done and they were done after verification against the original questionnaire had been done; the verification was done with the intent of minimizing imputations.

Data Update and Cleaning.

To complete the dataset, GQ records from Tinian and Rota that were previously not included in the 2005 HIES computer datafile were added into the datafile. The GQ data for Tinian came into the CSD office after all HHUs and Saipan GQ forms had been keyed into the computer and sent to the US Census Bureau for processing back in early 2006. For various reasons, HIES processing was delayed and the Tinian GQ records were never merged with the 2005 HIES datafile back in 2006. When CSD got the go ahead to use left over funds to process 2005 HIES, in November 2007, CSD asked the Rota Statistics Office to ask the only employer in Rota with GQ in 2005 to recreate the GQ form for that company, as of 12/05. The GQ form for Rota was keyed into the computer and merged

with the rest of the 2005 HIES records to complete the dataset. As much as possible, given time constraints, the datafile was reconciled to the actual questionnaires.

After verifying the computer datafile with the original questionnaires, some imputation was done, but the amount of imputation was small, excluding those imputations associated with GQ records.

Computer Programs used in the Tabulations

The set of statistical tables, which forms the bulk of this report, were processed using the U.S Census Bureau's Integrated Microcomputer Processing System (IMPS), a forerunner of current Census and Survey Processing System (CSPPro). Over the years, CSD had been processing the CNMI censuses and surveys with the US Census Bureau. The set of tables were imported in MS and published in this format.

Personnel

Initial Data processing for 2005 HIES was carried out at the Census Bureau's International Programs Center in Maryland with the assistance of Mr. Diego Sasamoto, Mr. Michael Stroot, Mr. Joshua Hadley and Dr. Michael J. Levin. Final processing and tabulations were completed by Dr. Levin, from Harvard University, and Justin H. Andrew from the CSD. Assisting them were Wil Maui, private consultant, and the CSD staff, particularly Fermin C. Sakisat, Jose T. Liwanag, CSD Director from Saipan, and Agida Quitugua from Rota. The team worked together to add the data that were not included in the original 2005 HIES datafile in early 2006, which should have been included. They reconciled the computer datafile to the original questionnaires as much as possible, made the necessary edits and other changes to the data and the data dictionary.

This final publication was pieced together by Wil Maui, Justin H. Andrew, Fermin C. Sakisat and Jose T. Liwanag.

Survey Funding

Money used to create the CNMI housing register, collect data for the 2005 HIES, complete the data processing, and piece this report together was provided for by the Office of Insular Affairs, US Department of Interior. The CSD provided supervision and expertise and other in-kind contribution.

2005 HIES Samples and Weights

Island and Village	Before Actual Survey						After Survey Completed

Appendix B
List of Terms

AGE

The data on age were obtained from responses to questionnaire item “5” under the field “Age”. Age of the person was in complete years as of survey reference date; October 01, 2005. The age responses in “M” normally represents a person’s age. However, when the age response was unacceptable or unavailable, the age was derived from an acceptable year-of-birth response in the field “Date of Birth” under questionnaire item “M”. The variable age was asked of all persons who participated in the Survey. Age was asked of persons in the Households and Group Quarters.

CITIZENSHIP

The data on citizenship were derived from responses to “Citizenship” field under item “8”. This variable was asked of all persons in the Survey, both in Households and Group Quarters. Each person was classified into one of the six possible categories: (1) born in the CNMI, (2) born in the U.S., Guam, or other U.S. Territory, (3) born abroad of U.S. parent (s), (4) U.S. citizen by naturalization, (5) not citizen (permanent residence), or (6) not citizen (temporary residence).

EDUCATIONAL ATTAINMENT

The data on educational attainment were obtained from responses to questionnaire items 13a, 13b, and 13c. Persons were classified according to the highest grade of school completed or the highest degree received. For persons currently enrolled in school, the question included instructions to report the level of the previous grade attended or the highest degree received. A field of study in academic college or vocational school was asked from respondents as well as whether such field or training was taken at the Northern Marianas College (NMC).

EMPLOYMENT STATUS

The data on employment status were derived from responses to questionnaire items 20a to 25 which were asked of persons 15 years old and over in households. The series of questions on employment status was designed to identify in this sequence: (a) persons who worked at a job or business or farm at any time during the reference week (b) persons who did not do such work during the reference week, but who had jobs or business from which they were temporarily absent (excluding layoff); (c) persons on layoff; and (d) persons who did not work during the reference week, but who were looking for work to earn money.

Employed - All persons 16 years old and over who were either (a) “at work” – those who did any work at all during the reference week as paid employees or in their own business or profession, or on their own farm, or who worked 15 or more hours as unpaid workers on a family farm or in a family business; or (b) were “with a job but not at work” – those who did not do such work during the reference week, but who had jobs or businesses

from which they were temporarily absent due to illness, industrial dispute, vacation or other personal reasons.

The Survey excluded from the “employed” persons without jobs or businesses whose only activity consisted of work around the house or unpaid volunteer work for religious, charitable, or similar organizations; persons without jobs or businesses who did subsistence activity only.

Unemployed – All persons 16 years old and over who (a) were neither “at work” nor “with a job but not at work” during the reference week, or who did subsistence activity only; (b) were looking for work to earn money during the last 4 weeks; and (c) were available to accept a job.

The survey also considered as unemployed all persons 16 years old and over who did not work at a job or business during the reference week and were waiting to be called back to a job from which they had been laid off.

Labor Force – All persons employed and unemployed combined.

Not in Labor Force – All persons 16 years old and over who were not classified as members of the labor force. This category consisted mainly of persons doing subsistence activity only, students, housewives, retired workers, institutionalized persons, and persons doing only incidental unpaid family work (less than 15 hours during the reference week).

Subsistence Activity – A person was engaged in subsistence activities if he or she mainly produced goods for his or her own or family’s use and needs, such as growing/gathering food, fishing for home use, raising livestock, making handicrafts for home use, and other productive activities not primarily for commercial purposes. Subsistence activity categories shown with the “Employed” and the “Not in Labor Force” categories of the employment status concept, related to activities engaged in during the survey reference week. The Survey did not classify persons who did subsistence activity only during the reference week as “employed”, unless they were “with a job but not at work” (see definition of “employed”).

Worker – This term appears in connection with several subjects, for example, class of worker and weeks worked during the survey period. Its meaning varies and, therefore, should be determined in each case by referring to the definition of the subject in which it appears.

Actual Hours Worked Last Week – All persons who reported working at a job or business or farm during the reference week were asked to report in questionnaire item 21 the number of hours that they worked, excluding any time at subsistence activity. The statistics on hours worked for “employed at work” persons pertained to the number of hours actually worked at all jobs, and did not necessarily reflect the number of hours typically or usually worked or the scheduled number of hours.

The questionnaire items and the employment concepts for the Survey were essentially the same as those used in previous censuses including the 2000 Census.

RACE OR ETHNIC ORIGIN

The data on race or ethnic origin were obtained from the responses to questionnaire items 4 and 4a. Racial classification used in the Survey adheres to the 1997 notice issued to the US Census Bureau by the Office of Budget and Management (OMB) which species standards that govern the categorization of race in Census or Survey data products. The notice issued five (5) minimum identifiable race categories (White, Black or African American, American Indian or Alaskan Native, Asian, and Native Hawaiian or Other Pacific Islander).

In addition, “Ethnic origin refers to an individual’s origin or descent, “roots,” heritage, or place where the individual or his/her parents or ancestors were born.” Persons reported their ethnic group regardless of the number of generations removed from their place of origin.

Race or ethnic origin is different from other population characteristics that are sometimes regarded as indicators of ethnicity, namely country of birth and language spoken at home. Respondents were allowed to report multiple races of ethnic origin however, “responses were coded by a procedure that allowed for the identification of the first two responses reported.

In this publication, the Survey designated multiple groups in general open-ended categories such as “Chamorro and other group(s),” rather than in specific multiple ethnic groups such as “Chamorro-Carolinian”. We included person who reported “Chamorro-Carolinian” ethnicity, for example, in the “Chamorro and other group(s)”.

GROUP QUARTERS

The Survey classified all persons not living in households as living in group quarters. Two general categories of persons living in group quarters: (1) institutionalized persons and (2) other persons in group quarters (also referred to as “non-institutionalized group quarters”).

Institutionalized Persons – Included persons under formally authorized, supervised care or custody in institutions at the time of enumeration.

Other Persons in Group Quarters (also referred to as “non-institutionalized group quarters”) – Included all persons who lived in group quarters other than institutions. When 10 or more unrelated persons lived in the unit, they are classified as “other persons in group quarters”; otherwise, we classified these living quarters as housing units. Most of these types of group quarters that exist in the CNMI were for living arrangement for

companies that provide housing for their employees. These were mainly for garment manufacturing companies, construction companies and hotels.

HOUSEHOLD

A household included all the persons who occupied a housing unit. A housing unit was a house, an apartment, a group of rooms, or a single room that was occupied (or if vacant, was intended for occupancy) as a separate living quarter. Separate living quarters were those in which the occupants lived and ate separately from any other persons in the building and which had direct access from the outside of the building or through a common hall. The occupants might be a single family, one person living alone, two or more families living together, or any other group or related or unrelated persons who share living arrangements. The count of households or householders always equaled the count of occupied Housing units.

RELATIONSHIP TO HOUSEHOLDER

Householder – The data on relationship to householder were obtained from answers to questionnaire item “3” under the field “How is Related to (Person 1)? ”, that was asked of all persons in housing units. Relationship was not asked of persons in group quarters. The Survey designated one person in each of household as the householder. In most cases, the householder was the person, or one of the persons, in whose name the home was owned, being bought, or rented and who was listed as person 1 on the survey questionnaire. However, If no such person existed in the household, respondents or enumerators selected any household member 15 years old and over as the householder.

Two types of householders were distinguished: a family householder and a non-family householder. A family householder was a householder living with one or more persons related to him or her and were family members. A non-family householder was a householder living alone or with one or more persons – but with less than 10 and not related to one another.

FAMILY

A family consisted of householder and one or more other persons living in the same household who were related to the householder by birth, marriage, or adoption. All persons in a household who were related to the householder were regarded as members of his or her family. A household could contain only one family for purposes of survey tabulation. Not all households contained families since a household might compromise a group of unrelated persons or one person living alone.

INCOME

The data on income were derived from answers to questionnaire items 30 to 31. Information on money income received in the first quarter, 1999, was asked of persons 15 years old and over. “Total Income” was the sum of the amounts reported separately for

wage or salary income; net non-farm and farm self-employment income, interest, dividend, or net rental royalty income; Social Security or retirement income, public assistance or welfare income, and all other income.

Income of Households – Included the income of the householder and all other persons 15 years old and over in the household, whether related to the householder or not. Because many households consisted of only one person, average household income was usually less than average family income.

Income of Families and Persons – In compiling statistics on family income, the incomes of all members 15 years old and over in each family were summed and treated as a single amount.

Median Income – The median divides the income distribution into two equal parts, one part having incomes above the median and the other having incomes below the median. For households and families, the survey based median income on the distribution of the total number of units including those with no income. Median income for persons was based on person with income. Median income values for all households, families, and persons were computed on the basis of more detailed income intervals than shown in most tabulations.

Mean Income – Mean income is the amount obtained by dividing the total income of a particular statistical universe by the number of units in that universe. Thus, the Survey obtained mean household income by dividing total household income by the total number of households. For the various types of income the means were based on households having those types of income. “Per capita income” – the mean income computed for every man, woman, and child in a particular group – was derived by dividing the total income of a particular group by the total population of that group.

Care should be exercised in using and interpreting mean income values for small subgroups of the population. The mean is especially susceptible to the effects of misreporting and processing errors because it is influenced strongly by extreme values in the distribution. The median, which is not affected by extreme values, is a better measure than the mean when the population base is small. The mean, nevertheless, is shown in some data products for most small subgroups because, when weighted according to the number of cases, we can add the means to obtain summary measures for areas and groups other than those shown in survey tabulations.

INDUSTRY, OCCUPATION, AND CLASS OF WORKER

The data on industry, occupation, and class of worker were obtained from answers to questionnaire items 26 to 28. Information on industry related to the kind of business conducted by a person’s employing organization; occupation described the kind of work the person did on the job.

For employed persons, the data referred to the person's job during the reference week. For those who worked at two or more jobs, the data referred to the job at which the person worked the greatest number of hours. The survey derived industry and occupation statistics from the detailed classification systems developed for the Census 2000 and the 2003 Community Survey as described below.

Respondents provided the data for the tabulations by reporting descriptions of their industry and occupation. Clerks in the Central Statistics Division's processing office used these descriptions for coding. The clerical staff converted the written questionnaire descriptions to codes by comparing these descriptions to entries in the Alphabetical Index of Industries and Occupations.

INDUSTRY

The industry classification system used during Census 2000, updated in 2002 and used in this Survey, consists of 265 categories for employed people, classified into 14 major industry groups. From 1940 to 1990, the industry classification has been based on the *Standard Industry Classification (SIC) Manual*. The Census 2000 classification was developed from the 1997 North American Industry Classification System (NAICS) published by the Office of Management and Budget, Executive Office of the President. NAICS is an industry description system that groups establishments into industries based on the activities in which they are primarily engaged.

OCCUPATION

The occupational classification system developed for the 1995 Census and used in this Survey consists of 500 specific occupational categories for employed persons arranged into 6 summary and 13 major occupational groups. This classification was developed to be consistent with the Standard Occupational classification (SOC) Manual: 1980, published by the Office of Federal Statistical Policy and Standards, U.S. Department of Commerce. Tabulations with occupation as the primary characteristics present several levels of occupational detail.

CLASS OF WORKER

The data on class of worker were derived from answers to questionnaire item 28. The information on class of worker referred to the same job as a respondent's industry and occupation and categorized persons according to the type of ownership of the employing organization. The class of worker categories is defined as follows:

Private wage and salary workers – Included persons who worked for wages, salary, commission, tips pay-in-kind, or piece rates for a private for profit employer or a private not-for-profit, tax exempt or charitable organization. Self-employed persons whose business was incorporated were included with private wage and salary workers because they were paid employ employees of their own companies.

Government Workers – Included persons who were employees of any local, territorial, or Federal government unit, regardless of the activity of the particular agency.

Self-employed workers – Included persons who worked for profit or fees in their own unincorporated business, profession, or trade, or who operated a farm.

Unpaid family workers – Included persons who worked 15 hours or more without pay in a business or in a farm operated by a relative.

MARITAL STATUS

The data on marital status were derived from answers to questionnaire item 6, which was asked of all persons 15 years old and over in households. The marital status classification referred to marital status at the time of enumeration. Data on marital status were tabulated only for persons 15 years old and over. All persons were asked whether they were “now married”, “separated”, “widowed”, “divorced”, or “never married”. Couples who lived together (unmarried persons, persons in common-law marriages) reported the marital status they considered the most appropriate.

REFERENCE WEEK

The Survey related data on current labor force status relate to the reference week: that is, the calendar week that precede the date on which the respondents were interviewed by enumerators. This week was not the same for all respondents since enumeration was not completed in one week. The occurrence of holidays during the enumeration period could affect the data on actual hours worked during the reference week, but probably had no effect on overall measurement of employment status.

SCHOOL ENROLLMENT AND TYPE OF SCHOOL

The data on school enrollment were obtained from answers to questionnaire item 12. Persons were classified as enrolled in school if they reported attending a regular public or private school or college at any time during the Survey period.

SEX

The data on sex were derived from answers to questionnaire item 2, which was asked of all persons. For most cases in which sex was not reported, the Survey used the appropriate entry from the person’s given name and household relationship. Otherwise, sex was imputed according to the relationship to the householder and the age and marital status of the person.

WORK STATUS

The data on work status were obtained from answers to questionnaire items 29a to 29c.

Work Status in the Survey – Persons 16 years old and over who worked 1 or more weeks according to the criteria described below were classified as “worked” during the Survey; all other persons 16 years old and over were classified as “did not work” during the Survey period.

Weeks Worked – The survey derived data on weeks worked in the year 2004, from answers to questionnaire item 29b. Question 29b (Weeks worked in 2004) was asked of persons who indicated in Question 29a that they worked during the Survey period.

The data pertain to the number of weeks during which a person did any work for pay or for profit (including paid vacation and paid sick leave, but excluding subsistence activity) or worked without pay on a family farm or in a family business.

Usual Hours Worked per Week Worked – The survey derived data on usual hours worked per week worked in 2004, from responses to Question item 29c. This question was asked of persons 16 years old and over who indicated that they worked in 2004. This question (29a to 29c) was not asked of persons in group quarters.

The data pertaining to the number of hours a person usually worked during the weeks worked in 2004. The respondent was to report the number of hours worked per week in the majority of the weeks he or she worked during the Survey period. The statistics on usual hours worked per week worked were not necessarily related to the data on actual hours worked during the Survey reference week.

Persons 16 years old and over who reported that they usually worked 35 or more hours each week during the weeks they worked were classified as “Usually worked full time”; persons who reported that they usually worked 1 to 34 hours were classified as “Usually worked part time”.

YEAR OF ENTRY

The Survey derived data on year of entry from answers to questionnaire item 9, which were asked of all persons 15 years old and over.

SURVEY GEOGRAPHY

In the absence of an addressing system that is consistent with the US mainland house addressing system, the Statistics office adapts and uses the US Census Bureau’s method of pinpointing, identifying and recording all housing units in the Commonwealth by Geographic Survey Blocks, Survey Assignment Areas and Map Spots.

Geographic Block – Each of the islands is divided into small geographic unit referred to as a block. The size and boundary of each block was determined based on the existing roads, mountains, cliff lines, streams, and prominent landmarks. Population concentration was also an important consideration for delineating block boundaries. As much as

possible, where appropriate, the boundaries followed and were drawn consistent with boundaries used in previous census block boundaries in prior years.

Assignment Area – In each of the islands, geographic blocks are combined to form Assignment Areas (AAs). Similar to the formation of the blocks, the size and boundary of each AA was determined based on the existing roads, mountains, cliff lines, and prominent landmarks. The number of houses in the area was an important factor in determining the size of the AA. A major consideration was to keep the number of houses in each AA manageable for field work.

Each AA is assigned a unique 4 digit number. AAs for Saipan are numbered using 1001 to 1999. Tinian AAs use 2001 to 2999, and Rota AAs use 3001 to 3999. Saipan has a total of 259 AAs, Tinian has 38, and Rota has 48.

Each of the blocks is assigned a 3 digit number. Each AA uses the same numbering series for its blocks; for example, AA 1008 has blocks numbered 201, 202, and 203, up to 209.

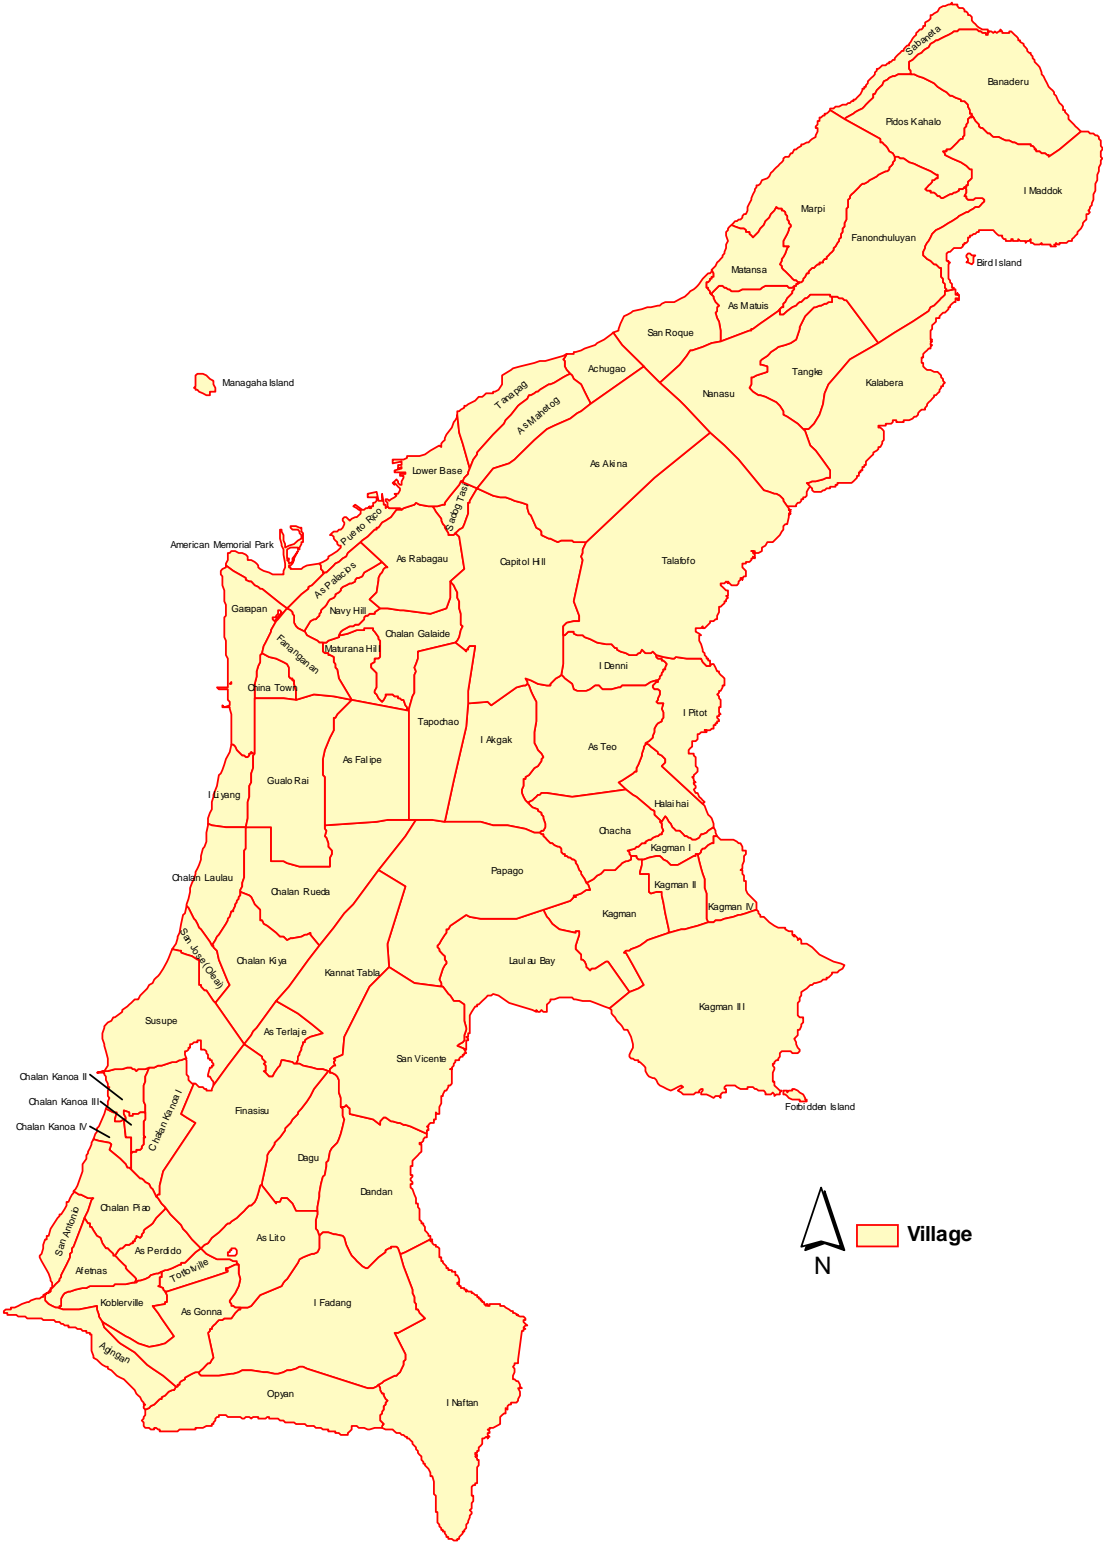

Map Spot – Within each block, each of the housing unit is assigned a unique number, referred to as the Map Spot number. The numbering of the units in a block always starts with one (1) and continues sequentially to however many is needed to account for all units in a particular block. A number is issued only once and never repeats within a particular block. The map spot number is 4 digits.

Using the above scheme, each of the housing unit in the CNMI is given a unique number or address based on Island, AA, Block, and Map Spot sequence. For example, the 3rd housing unit in Block 201, AA 1008, in Saipan is given the housing ID 1, 1008, 201, 0003.
